Cociane Chemical Sourcing!

Kerosene
Places to buy: Go outdoors, Tesco, Petrol stations, B&Q. -
BUY IT HERE

Sodium Carbonate
Can buy from grow shops as PH-UP / PH-PLUS, to increase ph levels of water,
and also at aquarium places for same use. Will probably be cheaper online though. Make sure you buy the granular version or powder. Not liquid.

BUY IT HERE

Sulphuric acid: B&Q, Hardware stores, plumbing merchants, Ebay; It is sold as 95%-99% sulphuric acid drain cleaner. Usually red or purple in colour from DIY stores, but clear as a pure form. Either will do fine.

Ammonia: 9.5% /10% is usually sold over the counter. Used to be available from Homebase, but now it isnt stocked in many places. It is best to buy online. Make sure it is pure and has no perfumes added, and it should not foam up. No lemony smells etc.

BUY IT HERE

POTASSIUM-PERMANGANATE : Another product that over the years has become hard to get in stores. It can be found in chemists and pet stores as a disinfectant or dye. Bought online easily. Amazon or Ebay. Some pet medical supplier shops will sell this also. Instore and online.

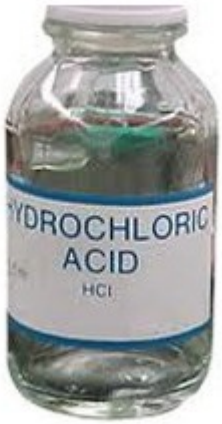
BUY IT HERE

Acetone - A powerful, general purpose solvent, ideal for degreasing and cleaning tools, brushes, rollers etc
Can be found over the counter as a product called Blue Gee Acetone. Many shops stock it. Can be bought online easily also. (Needs to be pure. If water is allowed to get into the acetone, this will cause problems with crystallising the cocaine. You need anhydrous acetone for this stage. A brand new bottle of acetone should be fine. Keep the bottle open for as little time as possible. Store in a dry place.)

Methanol - Used for the production of bio diesel at home. Easier to buy online. If this is difficult to find, IPA or isopropyl alcohol can be used in the same manner during crystallising stage. IPA or isopropyl alcohol can be bought from a shop called MAPLIN over the counter in 1litre metal tins. They are an electronics store. You can find it in places like this, for cleaning computer parts, etc. It will have very little, if any, water in it, which is great. Please consult me if you go down the route of using IPA instead of METHANOL for crystallising your cocaine.
BUY IT HERE

Hydrochloric acid (Also known as - Muriatic acid) 36%/37% - Difficult to get in stores, but can be bought as patio/brick cleaner. Specialist hardware stores may stock this. Using an online source is much easier. You're more likely to get the strong 36/37% acid as opposed to a potentially weaker one from a store. You need high strength or yield will be lowered.

BUY IT HERE



Ether: Diethyl Ether, Hard to get over the counter in store. Almost definitely buy online. 1litre will last about 10kg worth of extractions. Extremely flammable. Not required. Methanol and acetone / IPA and acetone can be used instead. Very useful and good time saver if you can buy this though.
